

Tailored to how you work, not the other way around.

Use EazyTouch to Save Money & Enhance the User Experience

TransLution EazyTouch screens are configured to include only those operations relevant to each process, including buttons to print labels, view picking orders or stock count data, or reveal production instructions.

Do you need to:

- Capture data on an industrial touch-screen PC to support production workflow?
- Interface with weighing devices or a barcode scanner during production?
- Use “ruggedized” tablet PCs in the warehouse, loading dock or factory floor?
- Provide your operators with big buttons on screens that are easy to use?
- Print labels during production?
- Integrate production data and other stock movements with SYSPRO software?

A touch-screen device with TransLution EazyTouch may be the answer to these problems.

Enhanced SYSPRO Integration

With EazyTouch you can select a number of SYSPRO software integration transactions from our extensive list of supported functions. You can configure EazyTouch to post specialized information captured on the scanner into SYSPRO:

- Lot Numbers
- Serial Numbers
- General Ledger Codes
- Additional References and Notations
- Any additional data fields supported by SYSPRO

AVAILABLE ON

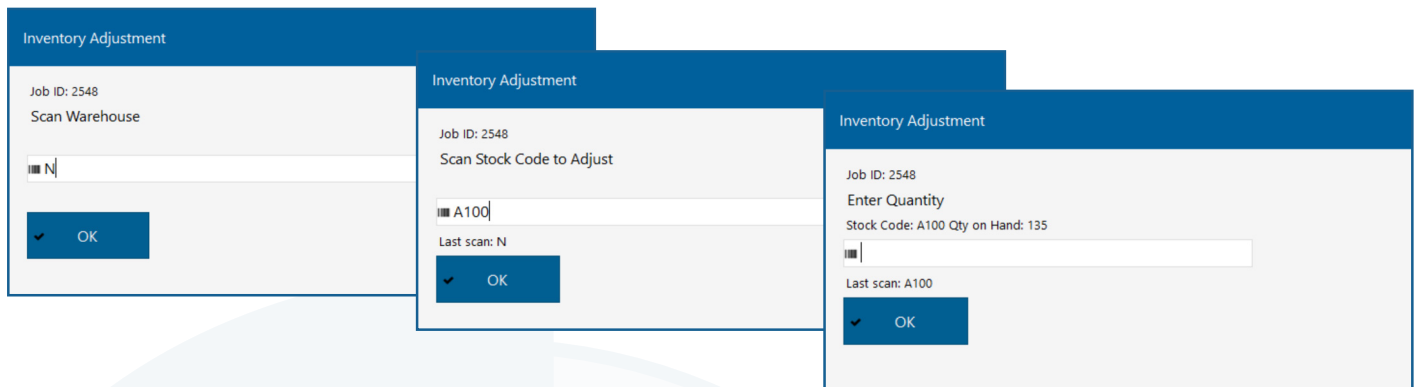

TRANSLUTION EAZYTOUCH ADVANCED FEATURES AND FUNCTIONALITY

Scanning Functionality

TransLution EasyTouch, at its most simple level, can be used to perform the same scanning functions as TransLution EasyScan. Because we have much more screen space on a PC, EasyTouch offers many other features in addition to the basic scanning functionality. Some of these are described below.

The first example is an inventory adjustment which works in the same way on both EasyScan and EasyTouch.

Select	Stock Take Session	Warehouse	Bin	Stock Code	Scanned Quantity	Syspro Quantity	Variance
	Session5	FG1	LOT100	FG1	12.000	10.000	2.000
	Session5	RM	RM	LOT101	500.000	488.000	12.000
	Session5	RM	RM	A100	34.000	32.000	2.000
	Session2	FG	FG	A100	6588.000	6588.000	0.000
	Session2	FG	FG	A200	12.000	6588.000	6588.000
	Session2	FG	FG	LOT101	1.000	10.000	9.000

Reviewing Before Posting Results to SYSPRO

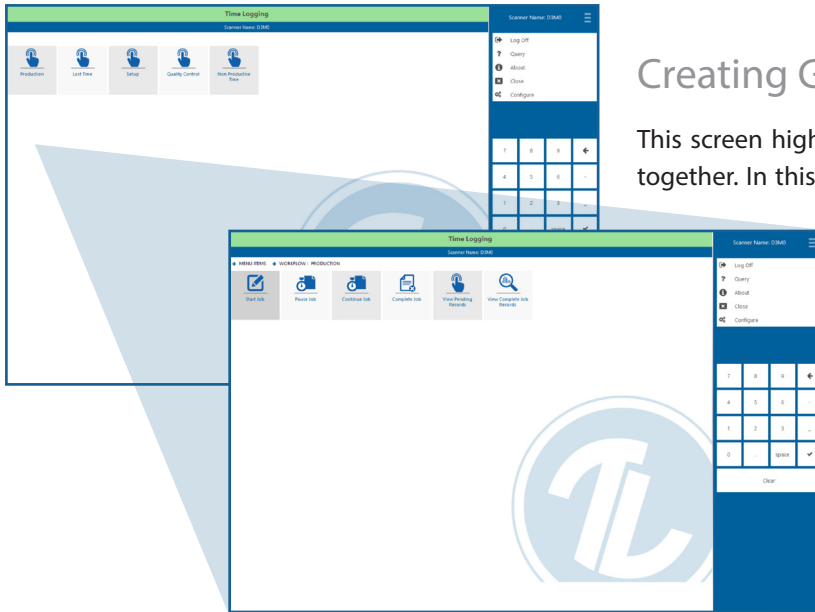

This example compares stock count from TransLution against SYSPRO inventory for verification prior to posting. You can change the data and post it to SYSPRO, or simply review the results.

Printing Barcode Labels

This screen shows the line items in a specific order. Here users can print barcode labels for line items as they are received.

Select	Line	MStock Code	MStock Des	MWarehouse	MOrder Qty	MReceived C
	1	A100	15 Speed Mountain Bike Boys	IN	1000.000000	0.00
	2	A101	15 Speed Mountain Bike Girls	IN	1000.000000	0.00
	3	A102	15 Speed Mountain Bike Ladies	IN	1000.000000	0.00

Creating Grouped User Functions

This screen highlights how functions in TransLution can be grouped together. In this example the WMS button allows the user to view all the Warehouse Management Systems features and functionality.

The second screen shows the features that are grouped under the WMS function. Once selected, the user can access all warehouse management functions.

Show a Grid of History

TransLution displays a history of previous scans, so the user can view the steps in the scanning process.

Integrating to SYSPRO

TransLution posts the data it captures from the shop floor to SYSPRO in real-time. This screen shows users any errors that occurred during integration. Users can then select to repost lines or cancel lines.

TRANSLUTION ROADMAP

Integration

Leverage existing SYSPRO and inventory software investments: Use TransLution to seamlessly integrate information captured on the production floor and in the warehouse with your existing system. TransLution supports multiple devices such as wireless barcode scanners, touch-screen PCs and tablet PCs, and delivers data captured directly into the accounting world of SYSPRO.

Shop Floor Integration

TransLution does not only integrate seamlessly to your ERP and other business systems, we also offer many options to integrate to shop floor equipment including scales and various IoT devices. This allows you to combine shop floor process data with your inventory data.

Data Analysis & Reporting

TransLution EazyQuery searches internal and external databases and presents information in customized views on-screen, with drill-down, print, and export to spreadsheet capabilities. EazyQuery further improves efficiency by automating processing, publishing and distributing query reports on a schedule for both internal and external users.

TRANSLUTION CLIENTS

TransLution Android

TransLution Android uses hand-held scanners, phones or tablets to provide instant availability of process information, offering maximum control, increased information accuracy, traceability, reporting and improved decision making.

TransLution Windows

TransLution Windows runs on a standard PC or touchscreen where screens are configured to include only those operations relevant to each process, including buttons to print labels, view picking orders, stock count data, or reveal production instructions.
