Need to do things a little differently—No problem!

Do you find that you need just a little more flexibility than a basic, vanilla setup. Well, EazyScan allows you to handle any number of additional fields and logic before posting. Some examples are below:

- Do you want to default the ledger code
- No Ledger Code barcodes-use a drop down
- Pass any data you require as a Syspro Reference
- If there is further data you need to log, please see our Logging Additional Data brochure

Interested in Other Transactions

See our other brochures for details of some of our other supported transactions. The most common are below but this list is not exhaustive:

- Bin To Bin Movements
- Warehouse Transfers
- Inventory Adjustments
- Product Receipts
- Job Issues
- Job Receipts
- Backflush
