

Tailored to how you work, not the other way round.

Use EazyScan to Save Money, Improve Accuracy & Reduce Loss

Everyone knows that using barcode scanning for recording stock movement in the warehouse or on the factory floor improves accuracy and reduces loss. However, until now, implementing a scanning system was time consuming, complicated and far too costly.

All that has changed. We can have your new TransLution™ EazyScan system up and running in as little as ONE DAY and at a cost well below what others offer. You can start with as few as one, two or three TransLution™ scanners can add more as you grow. EazyScan will support as few or as many scanners as you need.

Pre-configured scanner prompts make EazyScan simple to use. Our installation professionals will provide scanners, barcode printers, software and supplies, and will have your system running efficiently in no time. TransLution™ EazyScan is tailored to how you work, not the other way around.

Enhanced SYSPRO Integration

With EazyScan you can select a number of SYSPRO transactions from our extensive list of supported functions. You can configure EazyScan to post specialised information captured on the scanner into SYSPRO:

- Lot Numbers
- Serial Numbers
- General Ledger Codes
- Additional References and Notations
- Any additional data fields supported by SYSPRO

AVAILABLE ON

TRANSLUTION™ EAZYSCAN ADVANCED FEATURES AND FUNCTIONALITY

Structured Barcodes

Barcodes can include a range of data that can reduce the number of scans required in your process.

For example, these barcodes include two different sets of data - [L] for Lot Number and [Q] for Quantity - that can be retrieved by the scanner (or identified visually by the user).

SYSPRO Transactions Supported

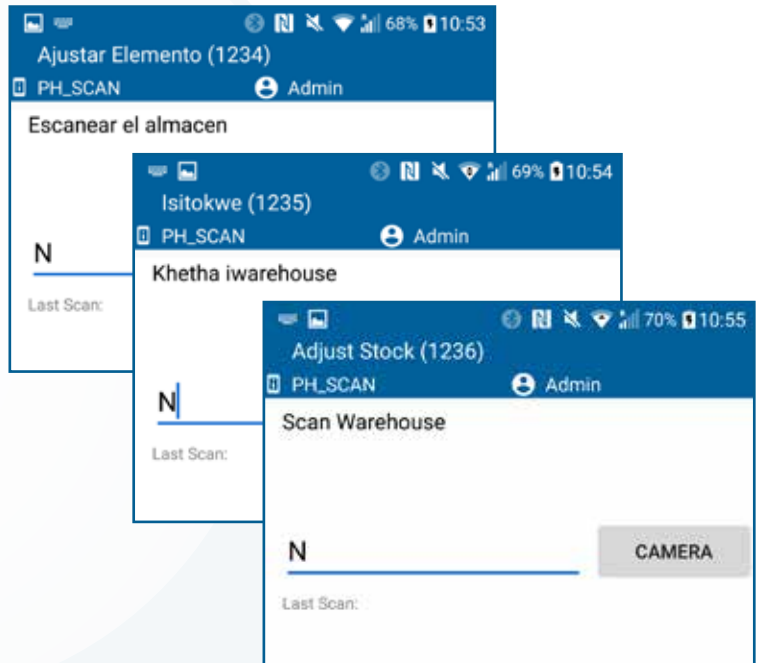

TransLution™ supports integration with all the primary SYSPRO business areas. We regularly post Inventory, WIP, Sales Order and Purchase Order transactions in a wide variety of implementations.

In addition to supporting an extensive range of business transactions, we are also flexible in how we support them. Do you use lot numbers or serialisation, inspection or standard receiving, dispatch notes or invoices, specific GL codes or general codes? For any business process, we tailor the transaction setup in order to allow you to post the data you need in the way you need.

Multi-Language Support

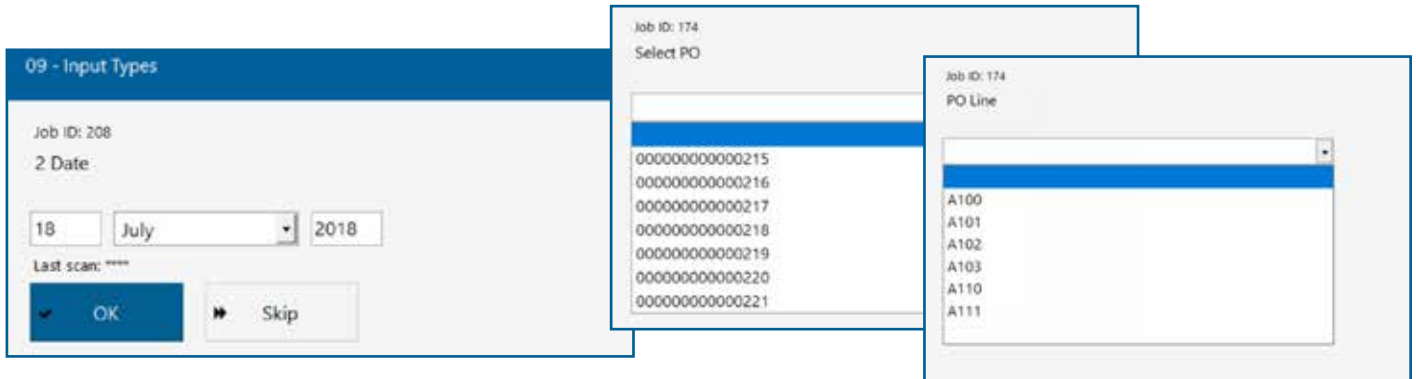

Each user is assigned a preferred language that is used when they log in.

- **The English user will see:** What warehouse are you in? – What item do you want to adjust? – How many items are you moving?
- **The Afrikaans user will see:** Kies pakhuis? – Watter item will jy verstel? – Hoeveel will jy verstel?
- **The Zulu user will see:** Ukweyiphi iwarehouse? - Yini ofuna ukuyilungisa? - Zingakhi izinto ozisusayo?

Power of Scanner Prompt Sequences

- You don't have to scan or enter data – we can provide you with a drop-down and date-and-time pickers. e.g Select Purchase Order – See only the Stock Codes that are on that order.
- Enter production date / batch expiry date.

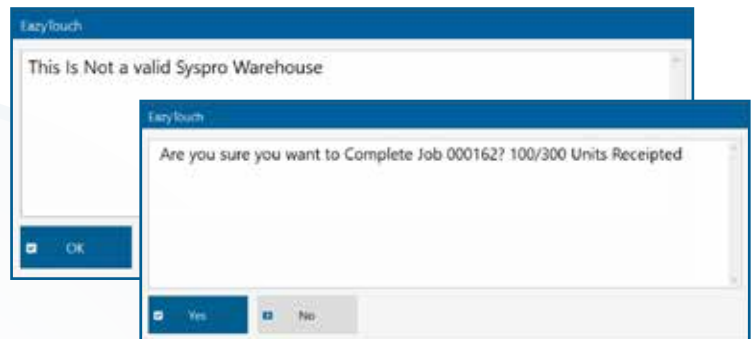

Power of Validation

Validate SYSPRO data:

- Is this a valid stock code for this warehouse?
- Is the quantity entered available to be moved?

Validate custom data:

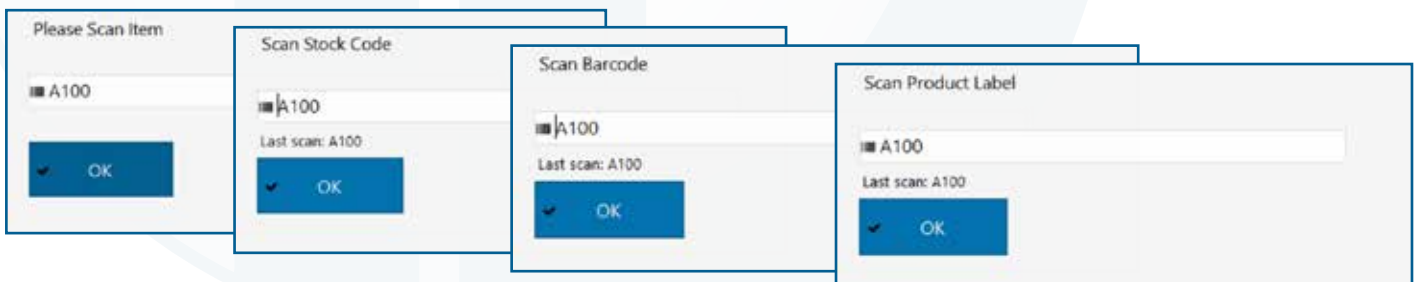

- Did we scan this lot number previously?
- Is this a valid serial number?
- What items are on this pallet?

Power of Configurability

The real strength of TransLution™ lies in the fact that even though so much is pre-configured for users, it is a simple task to change and reconfigure how the software looks and works. Some configurability examples are as follows:

- **Prompt text:** 'please scan item' can become 'scan stock code', 'scan barcode', 'scan product label'.
- **Scanning sequence:** you can scan or enter data in any sequence and design prompts to suit your workflow.
- **Fixed values:** If all transactions are performed in the same warehouse this value can be defaulted and never seen by the user.

TRANSLUTION™ PRODUCTS

TransLution™ EazyScan

EazyScan uses hand-held scanners to provide instant availability of process information which results in maximum control, increased information accuracy, traceability, reporting and improved decision making.

TransLution™ EazyTouch

EazyTouch runs on a standard PC or touchscreen where screens are configured to include only those operations relevant to each process, including buttons to print labels, view picking orders, stock count data, or reveal production instructions.

TRANSLUTION™ IN USE

Quality Management

Promotes compliance during the sampling process and ensures accurate recording of product quality and environmental factors during the production process. Quality Manager supports legislative requirements enabling traceability and product recalls.

Warehouse Management

A wide range of inventory management functions are supported from PO receiving, WIP transactions, GIT transactions, standard Inventory Transactions and Sales Order processing. Posting directly to SYSPRO allows for accurate stock control and warehouse management.

Repairs Management

In a repair shop, tracking jobs and parts and monitoring the repair progress can be a challenging task. TransLution™ allows you to seamlessly track the entire repair process, including materials used and time spent on the repair.

Manufacturing

Accurate accounting of manufacturing costs requires detailed and timeous capture of both labour and materials data. Scanning and capturing data during a job or while moving a product allows for tighter controls in order to reduce waste, improve stock accuracy and increase productivity.

TRANSLUTION™ CLIENTS

TransLution™ services over 350 companies, and supports over 3 600 mobile devices across multiple industry sectors:
