Need to do things a little differently—No problem!

Do you find that you need just a little more flexibility than a basic, vanilla setup. Well, EazyScan allows you to handle any number of additional fields and logic before posting. Some examples are below:

- Do you always receive a quantity of 1-make it defaulted and invisible to the user
- Do you want to pass a reference-do it automatically
- Do you want to the operator to enter a reference-allow a reference to be scanned

Interested in Other Transactions

See our other brochures for details of some of our other supported transactions. The most common are below but this list is not exhaustive:

- Bin To Bin Movements
- Expense Issues
- Warehouse Transfers
- Product Receipts
- Job Issues
- Stock Adjustments
- Backflush
